

1 ORGANIZING COMPUTER NETWORK IDENTIFICATIONS AND CONCURRENT  
2 APPLICATION OF POLICY SELECTORS

3 Abstract of the Disclosure

4 Methods, apparatus, and computer-readable media for  
5 associating computer network identifications with network  
6 policies. A plurality of network detectors (3) are coupled to a  
7 client computer (1). A network probe (4), coupled to the network  
8 detectors (3), associates each network identification revealed by  
9 a network detector (3) with a netspec. A netspec database (6),  
10 coupled to the network probe (4), associates netspecs with  
11 locations. A policy guide (8), coupled to the network probe (4),  
12 associates network identifications with locations. A network  
13 interface module (9), coupled to the policy guide (8), implements  
14 network policies based upon locations.
